Bilateral Meetings

- Thursday (10:00am - 12:00pm)

Description

ARXIBIB,S.L. is a company with more than 25 years experience in Topography, Cartography and Geographic Information Systems (GIS).

Now, we are specialised in cartography at E: 1/200 in small and big urban extensions, as well as in services inventories of urban areas.

We are using a methodology spearheading Europe, knew as “**Cartography in Real Time**”, converting us in the first and single company applying this technology in Spain.

Cartography in Real Time technique allows us to do field activities and draw at the same time.

For this reason, the office labour is reduced between 60 and 80% and many other advantages are offered regarding the conventional cartography.

Thanks to the implementation of this innovative technology we obtain cartography with higher quality and accuracy, reducing time and cost. This methodology becomes the most suitable to carry out topography, cartography and Geographic Information Systems (GIS).

You could appreciate the operating mode of this methodology in the following video:
<http://www.arxibib.com/wordpress/videos-5/>

Our company has a long experience in these kinds of works, thanks to our wide experience during these last 5 years in the Spanish and French market places, using this methodology.
