Description
DataLong16 is a young Spanish company born of extensive experience in advising the cold chain in the field of logistics. Our DL16 allows companies the specific control of the cold chain and online national, continental or global level, without installation. Also allows control of parameters such as location, temperature (with possibility of two temperatures each), pressure, humidity and shock. All these parameters affect our merchandise and the state of it. Currently, in collaboration with Vodafone a device with high performance, easy to use, pre-programmed with a year of operational autonomy and access to a platform to display information and get all the details of our shipping it is offered. It does not require any software to function. Simply access the internet you can have the information and access to your DL16. The product unit determined to control us and can be a box, a pallet, a container, a fridge, a camera, a van, a truck, a warehouse, etc ... We can set alarms to receive information about events such as arrival of the goods to a destination, temperature excursions, shock, etc The platform also allows users to register, create alarms, import reports, etc ... Given that our shipments are sometimes very distant destinations, we have developed single-use versions with limited duration from 1 month. The DL16 is a device designed to help decision-making in critical shipments. The event programming through alarms can receive in real time any critical change, allowing react and correct the events before they become a problem and are detected upon arrival of the product at destination.
