Bilateral Meetings

- Wednesday (10:00am - 12:00pm)

Description

Why

We intend to provide solutions to some of the fundamental and global human needs: access to clean water and sanitation, free-energy and connectivity.

Our mission is to improve global living standards for the most in-need people in the world. We strive to empower them with new possibilities, by helping them to become healthy, thus dedicating their vital energy to social evolution and education rather than mere survival.

How

We create technological solutions powered by clean and renewable energies. They respect and protect the Earth's ecosystem. They are conceived through innovative design and unconventional engineering approach. We are inspired by the 3rd Industrial Revolution paradigms and its potential.

What

We focus on both aspects of the technological development hardware and software.

In this respect, our software is so special that we had to build our own unique hardware. It just so happens that we build the most advanced and beautifully designed solar water purifiers and micro-powers station in the world.
