2. mobility on demand
3. public transportation
4. electric vehicle
5. car fleets
6. transport investments (Markets & Projects)

SUSTAINABLE CITY

1. liveable cities

2. city strategy
3. sustainability

Offer & Request

Sustainable mobility platform

Shared mobility platform based on a fleet of clean vehicles circulating on fixed routes. The platform offers following features: 1) Pay per use - the customer pay only for the effective usage, based on travelled distance; 2) Predictive algorithm to dispatch vehicles in order to have a ride available when needed and where needed and optimize the car occupancy factor; 3) Embedded loyalty system that allows local businesses and administrations to engage and fidelize customers by offering travel units as fidelity points.

We are looking cities that want to test our solution. We already have strong industrial partners and the projects has been funded by the FrontierCities program.

Cooperation Offered

1. Technical co-operation

Cooperation Requested

1. Technical co-operation
