Offer

## Traffic data management software

iTraffic is an expert system that obtains, processes and displays information from traffic data, completely developed by Geminis. Basically, this system allows you to transform the data from many sources into useful and relevant traffic information.

iTraffic obtains, processes and displays information in real time. The system allows to: make reports (from historical information or forecasts of expected behaviors); inform the citizen; integrate or correlate data; automate alerts or incidents; filter out erroneous data; get traffic data thanks to the fleet of buses; exchange information with third parties.
