Bilateral Meetings

- Wednesday (10:00am - 12:00pm)
- Wednesday (12:00pm - 2:00pm)
- Wednesday (2:00pm - 4:00pm)

Description
Since 1995, K2 Geospatial has been committed to bringing spatial information and analysis tools within everyone's reach by developing software solutions that provide effective visual aids to decision-makers. K2's Map-Based Solutions connect, consolidate and publish data which are managed and stored in silos in different systems. Employees and citizens can then easily access the information, analyze it and have a real-time ability to decide. These solutions are designed for land, infrastructures, buildings management as well as for environmental and public safety purposes. They are used by cities, regional governments, ports, airports, road authorities, railways, public utilities and natural resources companies. K2's solutions are powered by JMap, a map-oriented integration platform designed to connect silos and offer easy to use interfaces dedicated to non-technical users. Furthermore, for software developers, JMap can be easily embedded in their existing solutions. JMap is deployed and used by hundreds of organizations in North and South America as well as in Europe. Each day, thousands of employees and citizens from different organizations, in different contexts and with different requirements, use JMap to access their spatial and non-spatial data (from GIS, databases, sensors, GPS, RFid, Web Services, videos, ect.) in order to get a global and a real-time overview of their operations. With JMap, cities easily implement Spatially Smart Solutions which improves their operational and strategic decisions.

Areas of Activities

SMART SOCIETY

1. liveable city
2. collaboration

TECHNOLOGY

1. Services integration
2. city platform
3. Internet of things cloud
4. big data
5. visualization
6. geo information
7. data analysis
8. security
9. public safety
10. emergencies

GOVERNANCE

ENERGY

1. ICT

MOBILITY

1. Intelligent transport systems

Offer

Technical/Commercial Partnership

JMap is a map-oriented data integration platform that provides decision-makers with a real-time ability to view and act on all information they have in their various systems and databases. It solves the usual problem of lack of communication across systems, which can lead to costly bottlenecks and operational conflicts. Essentially sitting on top of existing systems, the solution offers a menu-layered view and access to all of the organization's information.

Cooperation Offered

1. Technical co-operation
2. Sales / Distribution
