Description

An expert company specialized in calculating emission and cost effects of urban plans. We have created a SaaS that can be used globally by urban planners. The service helps planners to evaluate the co2 emissions and the costs of their plans. Compared to outsourcing these evaluations to consultant companies the service saves lots of time and money from the planning process. It also gives the opportunity to compare one`s plans with other cities and/or plans.

Eventually the use of our service will help cities to develop more sustainable urban structure both ecologically and economically. We are looking for end users (cities & city designers), partners in sales and localizing the SaaS to new markets and investors to help us grow and conquer new markets faster.
