Low Carbon Cities

The Smart Management Solution
for sustainable leader cities

What is
Sicasoft
Low Carbon Cities?

Sicasoft Low Carbon Cities is a technological solution for **efficient energy and water consumption management and to reduce the climate footprint** in private companies and Local administrations.

How it works?

- Obtain the **indicators about energy and water consumption** related with your activity.

- Obtain the **Carbon footprint and the water footprint.**

- Calculate the **indicators in the whole city and the different city areas.**

- Compare the **different index and the average in the city.**

Better decisions
Better results

- Recognize the **environmental impact** and how to control it.

- Take the decisions to **reduce the carbon footprint** and improve your **environmental competitiveness**.

- Get real time **environmental information** to control the productive process and improve the work line to be **more efficient and reduce the costs.**
